Datasheet

Digital Risk Protection

Cyber threat intelligence to defend your assets and understand your adversaries' plans before they strike.

Your organization's risk extends beyond the assets it directly controls. Credentials, sensitive data, brands and executive identities can be exposed across the open, deep and dark web. Outpost24 Digital Risk Protection brings those signals together and adds the context security teams need to investigate and respond.

13+ years

Historical threat data supports trend analysis and investigation.

Broad source coverage

Data from open, closed and private sources, enriched by researchers.

Built for operations

Context-rich intelligence and integrations for SIEM, SOAR and TIP workflows.

Guiding You Through The Threat Landscape

Who is targeting you?

Understand adversaries, infrastructure and activity linked to your organisation.

Where should you act first?

Use context and supporting evidence to prioritise investigation and response.

What has been exposed?

Find compromised credentials, leaked data and unauthorised brand use.

How do we operationalize it?

Feed threat intelligence into existing workflows and partner service models.

From signal to action

Centralise external threat intelligence

Bring automated collection, analyst research and contextual evidence into one cloud platform. Give security teams a central point of control for operational, tactical and strategic threat intelligence, while supporting incident response and existing security tooling.

Outpost24

Datasheet

External Threat Visibility, Organized Around the Risks Your Team Needs To Investigate.

Account Takeover Protection

Identify exposed accounts, leaked, stolen and sold credentials across open, deep and dark web sources, including malware-derived evidence.

Dark Web Intelligence

Monitor underground activity connected to your organization and gain context on threat actors, discussions and planned attacks.

Data Leakage

Discover sensitive documents, source code and other information exposed online, on deep-web sources or peer-to-peer networks.

Brand and Social Media Monitoring

Find unauthorised use of brands, assets and claimed affiliations across websites, blogs, forums and social networks.

KrakenLabs Threat Intelligence

Threat actor reporting, indicators, vulnerabilities, TTPs, breach analysis and OSINT assessments.

Machine Readable Threat Intelligence

Connect intelligence to SIEM, SOAR and TIP tools, with flexible models for security teams, partners and MSSPs.
