

When it comes to security flaws, be the first to find them

Identify and remediate vulnerabilities in your infrastructure security

From stealing trade secrets to pirating customer information, cybercriminals are using more sophisticated tools and advanced techniques to disrupt your business. To stop them from finding holes in your defense, you have to find them first.

At Outpost24, we prepare you with vulnerability management (VM) tools—such as OUTSCAN and HIAB—and act as an extension of your team to evaluate your infrastructure from inside and out. Together, we shift the dynamic of your security strategy from reactive to proactive; saving you time and money from vulnerability identification to remediation, and making it even more difficult for hackers to attack the latest vulnerabilities.

When to improve your VM solution:

In doubt about your security posture or risk level

Want to build a culture of “security awareness” with audience-specific trends and insights

Limited staff and resources, or security expertise

Unsure about the value from your current VM and your ability to translate findings into remediation

Current VM does not play well with other security and operations technology ecosystem

3 out of 4 survey respondents reduced security flaws by at least 50% by using Outpost24's VM solutions.

Managing vulnerabilities in infrastructure security from the inside and out.

OUTSCAN for external management and HIAB for internal management.

Whether you're migrating workloads to the cloud, introducing mobile devices in the workplace, or SaaS solutions are being acquired by all parts of your organization; increasingly complex networks grow the number of publicly known vulnerabilities—increasing your risk of attack by external forces.

At the same time, many security breaches are actually caused by people with access to internal networks, including staff, vendors, and customers. To protect intellectual property and brand reputation when you're facing possible threats from all sides, your data and asset protection must be proactive.

Focus on solutions not problems

Solution-based reports provide actionable advice about improving security with less effort than sorting it out with limited security staff

Store your data, your way

Choose whether you want your data secured in our data center or in your private systems to meet data sovereignty requirements

Low-impact, low-effort scanning

Continuous scanning is best practice to prevent new weaknesses from creeping in. But when that's not possible, scanning-less scans highlight potential vulnerabilities based on last scan findings

One size fits all

Scale up and down to build an optimal solution whether you're a small business or global enterprise

Here for you when you need us

From setting up your VM program to providing ongoing help to fine-tune and improve effectiveness, we're at your side at all times

Built for you, by you

Out-of-the-box integrations and a complete set of APIs allow you to automate and/or orchestrate any parts of the process. You can define and implement efficiencies based on your unique needs

The most significant value we've realized since using Outpost24's Vulnerability Management Solution is the ability to

more clearly view the impact and severity

of risk we are exposed to.

—Security Manager, Medium Enterprise Media & Entertainment Company

OUTSCAN and HIAB features and specifications

Evaluate your systems and identify weakness much like a hacker would. OUTSCAN scans your perimeter externally and HIAB scans internally—and can be deployed as a virtual appliance behind your firewall.

Centralized administration

- Unlimited, customizable role-based user administration
- Secure access to the systems using your normal web browser
- Simple and intuitive asset management
- Remediation ticketing
- Quick verification of remediation by a single click in the interface
- Two-factor authentication log-in

Automated functionality

- Identify new exposed services
- Identify vulnerabilities and alert immediately
- Flexible scheduling of vulnerability scans
- Fully automated reporting with adaptable content
- Alerts via email or SMS upon new critical risks

Analysis

- Flexible data selection in reports
- Reports detailing trends, risks, solutions, and vulnerabilities
- CVSS (Common Vulnerability Scoring System) rating enables automatic, standardized prioritization of risks to remediate
- Identify and create reports based on solutions, providing the short and easy to use reports IT requires
- SLS (Scanning-less scanning) alert technology monitors security between scans to keep you constantly up to date

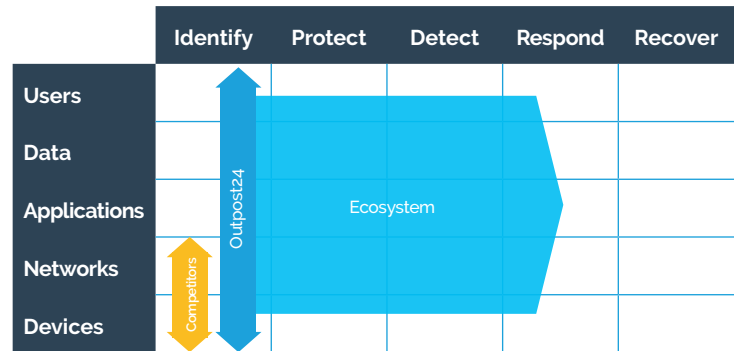

Extension:

- Flexible licensing and scalability allows for growth or changes in network assets
- Support for all types of network technology
- OUTSCAN can integrate seamlessly with HIAB, SCALE and SWAT solutions
- 100% open API enables custom

We defend you from hackers by thinking like them.

In fact, we have our own team of ethical hackers. That's why we approach security with a holistic view of your systems and pivot where a hacker would. Outpost24 is the only VM company that provides tools that correlate findings beyond just devices and networks—at the application layer and higher up the stack. We evaluate all key assets that keep your business running smoothly.

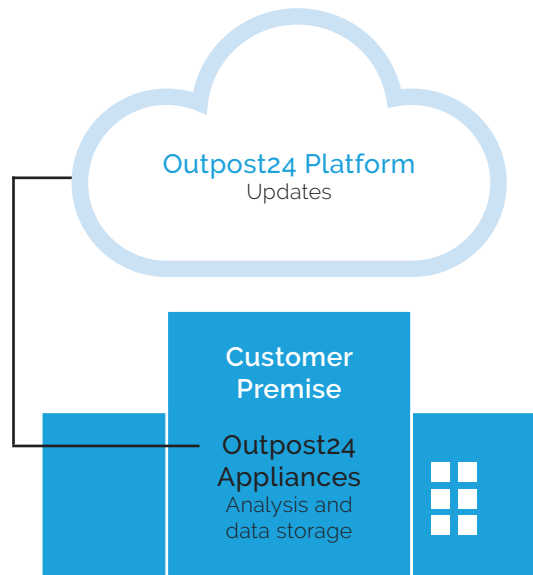

We also provide integration points to your other security and operational technology for a complete view of risk and how to react to it.

Deployment scenarios

Typical Deployment
