# Keeping your business safe

We don't think it's fair that businesses are targets of cybercriminals. As a leading cyber assessment company, we're on a mission to help our customers tighten their cyber exposure before their business can be disrupted. Our ethical hackers and the tools they've created provide a complete view of your security posture with solution-based insights that facilitate and prioritize remediation efforts.

## We offer scalable full stack cyber assessment solutions to reduce your attack surface:

### Network Security

Outpost24 provides easy to deploy and intuitive solutions to help you continuously identify, remediate and mitigate vulnerabilities on your network. Automated vulnerability scanning is performed on a frequent basis to discover vulnerabilities that are then ßrated and reported with a recommended remedy.

### Web Application Security

As more and more companies are embracing agile development cycles, Outpost24 blends manual penetration testing with automated scanning to secure DevOps quickly and easily. Scanning both web server, application layers as well as the infrastructure it runs on, our solutions offers a cost-efficient, accurate and easy way of assessing web applications.

### Cloud Security

Whether you are moving to the cloud (e.g. AWS, Azure) or deploying containerized apps (e.g. Dockers, Kubernetes), Outpost24 offers automated and continuous monitoring of your workload to secure data on public, private and hybrid cloud infrastructure.

### Penetration Testing

# Our Products

Outpost24 is a leading cyber assessment company focused on enabling its customers to achieve maximum value from their evolving technology investments. By leveraging our full stack security insights to reduce attack surface for any architecture, Outpost24 customers continuously improve their security posture with the least effort.

## Network Security

### Internal Network Vulnerability Security

HIAB (hacker-in-a-box) is an automated security solution that enables organizations to assess and manage technical threats against internal networks. HIAB™ is installed within the internal network and identifies vulnerabilities on all servers, workstations and other devices. With HIAB, scanning, reporting and all data analysis is performed within the appliance – ensuring that data never leaves your internal network.

### External Network Vulnerability Security

OUTSCAN is an on-demand security tool that enables organizations to assess and manage their external network vulnerabilities. OUTSCAN works from Outpost24's secure operations center, as a SaaS, to scan network perimeters, identify vulnerabilities and provide simple reports to identify cost efficient remediation.

### PCI ASV Compliance Security

OUTSCAN PCI is an on-demand, SaaS PCI compliance verification tool based on our OUTSCAN technology to verify and prove the compliance of credit card data handling with PCI Data Security Standard. As an Approved Scanning Vendor (ASV) by the PCI Security Standards Council.

## Web App Security

### SWAT

The Secure Web Application Tactics (SWAT) is the most accurate vulnerability management solution for web applications available in the market. It offers customers a combination of state-of-the-art web application scanning tools and experienced security technicians to deliver results with zero false-positives and full vulnerability coverage.

### Appsec Scale

Appsec Scale delivers an automated web application security testing solution that compliments Outpost24 SWAT and PEN testing. This production safe solution can easily onboard applications at scale, and continuously monitor their vulnerability profile. In fact, the Appsec engine is the same as the one used in SWAT which means it learns as SWAT learns. Combined with vulnerability management, Appsec Scale gives you a more complete view of your application risk, all visible in one interface.

### Snapshot

Snapshot works exactly the same as SWAT but in a 30-day engagement period, for companies needing a cost effective way to conduct security testing when launching new apps or for ad hoc quality assurance.

## Cloud Security

### Elastic Workload Protector

With EWP networks and servers are automatically discovered. Its unique cloning technology runs cloud security diagnosis in the server clone and keep the original production server untouched to minimize business disruption.

It's the only cloud analytics solution with an integrated vulnerability scanner. You'll be alerted of any new security breach and be able to focus your remediation effort with a clear and effective action plan.

> Using SWAT, many of the not-so-obvious security risks are made visible. This enables us to protect our applications and data even further.

Large Financial Services Enterprise

# Our Services

## Supported and implemented by our Security Experts

### Managed Services

Outpost24 offers a full-service alternative to internal management of cyber exposure assessments, reducing the cost and time needed to hire, train and manage an in-house IT security team. Regardless of business size, Outpost24's Managed Services will seamlessly integrate the vulnerability management solution that meets the needs of your organization.

### Penetration Testing Services

Outpost24 offers professional services to organizations looking for an added element of human intelligence to their security program. Our ethical, technical experts – professional "hackers" – hold certifications such as Certified Ethical Hacker and CISSP and conduct detailed tests for technical and logical security errors according to OWASP guidelines.

They then evaluate and document possible points of attack on your networks or applications and explore points of weakness as a cybercriminal would. We offer the following areas of professional services:

**Network & Infrastructure Assessments**

· Internal & External Audits
· Wireless Network Audits
· IPv4 & IPv6

**Web Application Testing**

· Authenticated
· Unauthenticated
· Stress & DoS Testing
· Applets
· REST
· HTML5

**Mobile Application Testing**

· iOS
· Android
· Windows Mobile

### Our customers

Over 2,000 customers in more than 40 countries around the world trust Outpost24 to assess their devices, networks, applications, cloud and container environments and report compliance status for government, industry sector, or internal regulations.

### Customer Success

We help customers unleash the full power of Outpost24, find and implement technical solutions, and provide guidance through deep relationships with our customers.

# The Outpost24 Advantage - The only platform to provide full stack cyber assessment

## Security-focused Development

Outpost24's products and services are inherently secure; our technology is developed in the context of security needs and not driven solely by compliance directives.

## Innovation

Outpost24 foresees market and organizational demands by pioneering full stack security assessment and continually developing features to help our customers proactively protect their critical assets and maximize their technology investment

## Direct Customer Support

Our direct support ensures that all customers get the technical support they need, on-demand, by qualified technology experts

## High Accuracy

Our innovative scanning tools are continuously improved to be the most accurate scanners on the market; Outpost24 maintains a uniquely low average of false positives.

## Unlimited Scalability

Outpost24 tools fit internal and external networks of all sizes and can integrate with different appliances to increase scalability and span vast networks.

## Virtualization

Outpost24 supports all major virtulization and cloud platforms, resulting in simple, swift and seamless deployment, distribution and management of security insights.

## Management-minded Reporting

We help you bridge technical cyber assessment management details and business interests by offering solution-based insights that facilitate and prioritize remediation efforts.

## Global Presence

Outpost24 understands the unique differences between markets. Our security and technical experts throughout the world work around the clock to help our customers improve cyber resilience.
