

Application security testing, but not as you know it.

Stay ahead of threats with pinpoint insights about application vulnerabilities.

Creating applications can improve customer experience, streamline operational processes, or even transform business models. It may even be one of your corporate strategies. But each application has security implications. And not keeping your app security up to speed with your changes increases the risk of cybercriminals disrupting your business.

To help you stay a step ahead, Outpost24 has developed the industry's most complete process to identify application weaknesses and correlate with infrastructure vulnerabilities. It begins with our expertise as ethical hackers and application Penetration testing service (Pen test). We've put that knowledge into an automated tool—Appsec Scale—that accelerates your understanding of risk, and we top it off with an unique hybrid services that combines automated tools and pen testing to provide maximum coverage for your critical applications. So when you're racing against hackers to your vulnerabilities, we'll give you a head start.

More than 3 out of 5 survey respondents reduced security flaws by 50% or more with Outpost24's Appsec solutions.

When to improve your application security solution:

Business would be impaired by disruption to web applications resulting in loss of revenue or inability to serve customers

Unsure about risk levels of internally developed or commercial web applications and web interfaces

Applications are developed with an agile process and are constantly changing, but the DevOps process does not include a complete security analysis

Human-based Pen testing is expensive, so testing is infrequent with large gaps of time between tests

Application security testing is uncoordinated with other vulnerability assessments leaving uncertainty about true security posture

Manual pen test + automated scanning = the most cost effective way to protect you critical applications.

Single contract, maximum coverage.

Cost and time are the main business driver in application security testing. One-time penetration testing gives you a thorough view of vulnerabilities but gets expensive fast. Alternatively, automated testing—such as Appsec Scale—gives you a good balance of speed to business-results for the volume of applications that keep your business moving ahead. But what if you can have the best of both worlds?

Our hybrid solution, SWAT, combines our automated testing with human Pen testing by Outpost24 security experts for business-critical apps. For agile DevOps processes, this testing can be conducted for every app change faster than—and just as deep as—Pen testing. Our innovative approach provides a pool of pen tests on a fixed price that you can test and pause when you need. And because we evaluate both the application and the infrastructure on which it runs, Outpost24 can present a more complete view of risk. To top it off, we provide real-time insights of your vulnerabilities to expedite remediation before the test is finished, and help verify your remediation efforts beyond the test length for best results.

Single contract

for a fixed fee

We provide a pool of pen tests for a fixed fee upfront to make pen testing your application as easy and cost-efficient as possible.

Works as fast

as you do

SWAT and Appsec Scale continually update as you make changes to your apps and infrastructure—or Pen tests your remediation efforts at time intervals that suit your business

Gives it to you

straight

Real time insights of your vulnerabilities presented in a single UI - you can start remediation even before the test is finish and automate report distribution to key stakeholders to improve security awareness for business critical apps

Think like

a hacker

By combining application security testing with infrastructure vulnerability management, Outpost24 helps you see how a bad actor would pivot and move to an alternate attack vector for a more complete view of your security risk

Digs down deep

zero false positives

Go as deep as needed for application logic tests for issue such as confidentiality, access restrictions and logical errors, ensuring there's no zero positives that can distract you

Here for you

before and after

Interact directly with our security experts who can help your organization learn and understand risk, and get your remediation efforts verified beyond the test length.

Which application testing solution is for me?

	One-time process	Continuous process
Deep analysis	 Snapshot	 SWAT
Rapid analysis	 Assure	 Scale

Outpost24 offers the unique combination of a manually-tuned pen test with 24x7 monitoring. Its ability to cover known vulnerabilities is a real plus compared to pen tests that have to be arranged on a regular basis.

Feature comparison

Feature	Scale	Assure	Snapshot	SWAT
Automated Scanning	✓			
Schedule & on demand scanning	✓			
Continual assessment of application				12 months
Manual Penetration testing		3 days	30 days	12 months
OWASP Top 10 2017 findings	✓	✓	✓	✓
WASC / CWE findings	✓	✓	✓	✓
NetSec (CVE findings)	✓	✓	✓	✓
No false positives		✓	✓	✓
Verification of remediated findings		30 days	30 days	12 months
Access to Analysts for questions		30 days	30 days	12 months
Adhoc / on demand reports	✓		✓	✓
Penetration test report		✓	✓	✓

In-depth look at our solutions.

Instant access to your vulnerabilities so you can remediate without delays.

Assure/Snapshot/SWAT hybrid testing—dashboard

Focus on trends that impact risk

Highlight the findings of your most recent changes

Appsec Scale—application enrollment

Simple onboarding process reduces time spent for volume application testing

Stay in control of testing traffic for each application

Assure/Snapshot/SWAT hybrid testing—test results

Detailed recreation flow helps you understand remediation

Discuss findings and issues with the experts right in the tool

Appsec Scale—test results

Risk score indexing helps you focus on the biggest impact

Detailed insights show how test was run to simplify remediation
