## About This Guide

The main purpose of this document is to provide users a comprehensive overview of the account settings for OUTSCAN and HIAB. This document has been elaborated under the assumption the reader has access to the OUTSCAN/HIAB Account and Portal Interface.

For support information, visit <https://www.outpost24.com/support>.

# 1 Getting Started

To launch the OUTSCAN application, navigate to <https://outscan.outpost24.com>.  
Users who have HIAB, connect to the HIAB by using its assigned network address.

**Note:** Use HTTPS protocol.

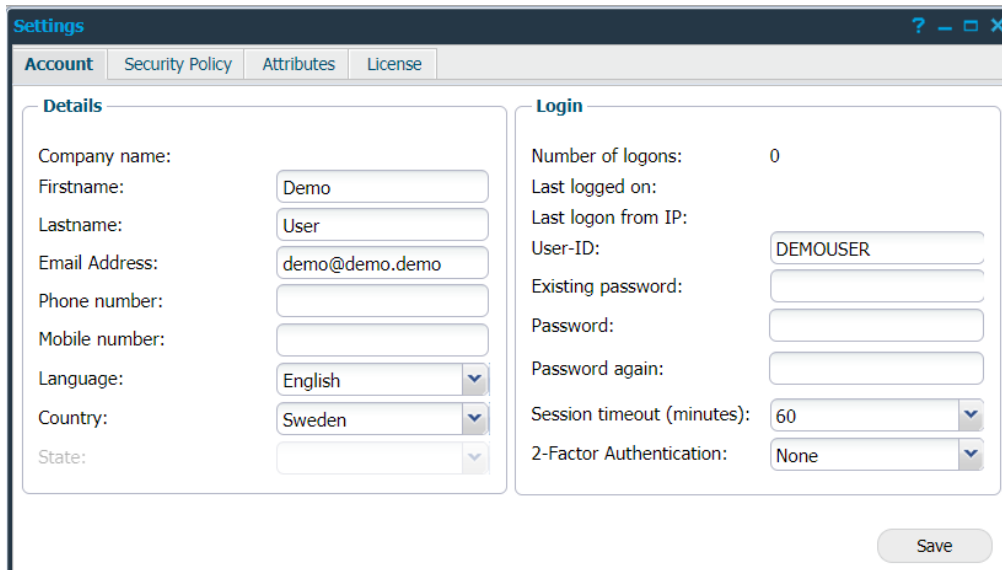

The image shows two side-by-side screenshots of authentication forms. The left form is titled 'Authentication' and 'Login to OUTSCAN'. It features a 'Username:' label with an input field, a 'Password:' label with an input field, a blue link for 'Forgot password?', and two buttons at the bottom: 'Login' and 'Single Sign On'. The right form is also titled 'Authentication' and 'Login to HIAB'. It features a 'Username:' label with an input field, a 'Password:' label with an input field, a blue link for 'Forgot password?', and a single 'Login' button at the bottom.

Log in using your credentials.

To access the Account Settings, go to **Main Menu** → **Settings** → **Account**

## 3 Account

In the **Account** tab the account *Details* and *Login* for a user can be edited.

### 3.1 Details

The **Details** area contains your personal information such as name, email address, phone number, language and location information.

Option	Description
<b>Company name</b>	Displays your company name.
<b>First name</b>	Provide your first name.
<b>Last name</b>	Provide your last name.
<b>Email address</b>	The Email address that you wish to bind to your account. This email address will receive notifications, recovered passwords, and update notes.
<b>Phone number</b>	Provide the phone number you wish to bind to your account.
<b>Mobile number</b>	Provide the mobile number you wish to bind to your account.
<b>Language</b>	The language that you would like the user interface to use.
<b>Country</b>	Your country location.
<b>State</b>	Select your state if applicable.

## 3.2 Login

The **Login** area contains account statistics, including the number of times that you have logged on. It also allows you to change your password, and your User-ID, which you use to login to the service.

The main user can also set the session timeout interval, if any time is specified a session for the main user and all sub-users will timeout if the user is inactive for the specified number of minutes.

Two factor authentication can be enabled and the mode of authentication is selected from here. Either **Mobile Security Code** or **Google Authenticator** can be used for authentication. The means used for authentication can be limited, depending on the options configured for two factor authentication under **Security Policy** tab.

When Google Authentication is selected, you are asked to enter the credential ID which is used to set up the account

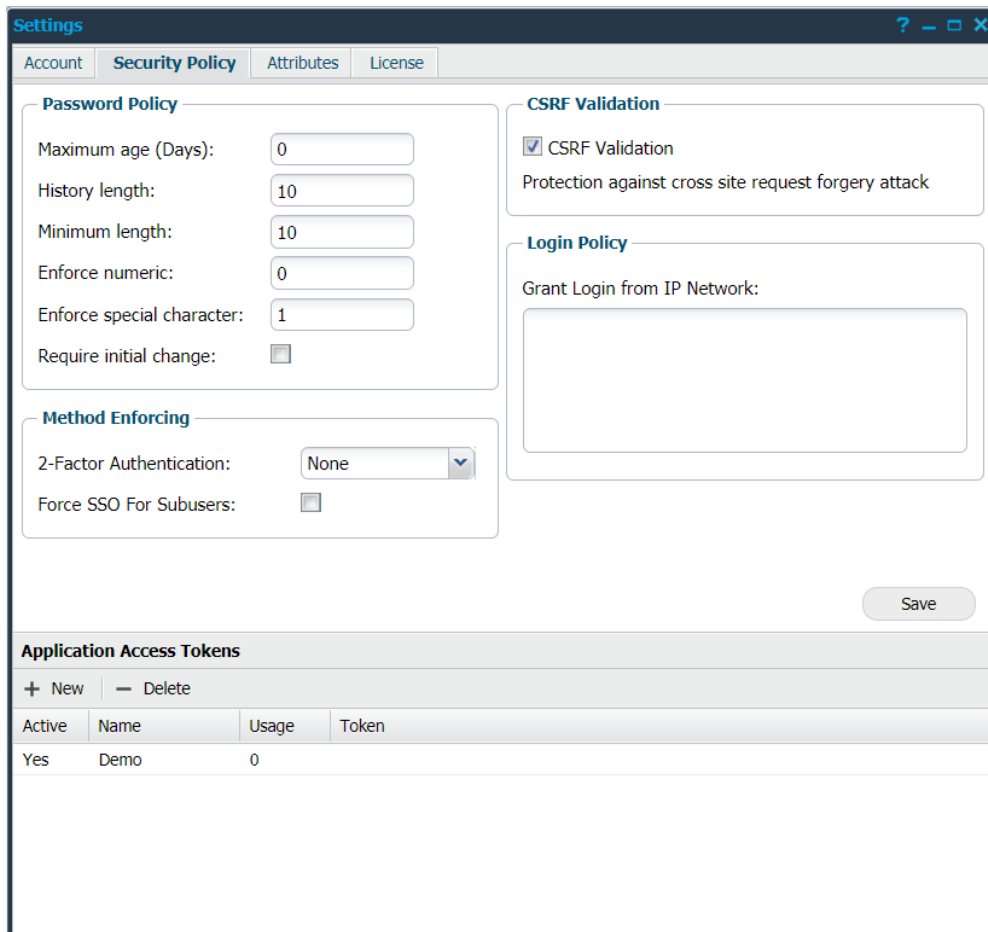

Option	Description
<b>Number of logons</b>	Displays the total number of logons.
<b>Last logged on</b>	Displays the date of your last logon.
<b>Last logon from IP</b>	Displays the IP of your last logon.
<b>USER-ID</b>	Displays your user ID.
<b>Existing Password</b>	If you wish to reset your password you must provide the account's current password in this field.
<b>Password</b>	The password that you wish to use for this account.
<b>Password Again</b>	Type the password that you wish to use once again.
<b>Session Timeout (minutes)</b>	For how long the system is allowed to be idle before your session times out and you are logged out.
<b>2-Factor-Authentication</b>	<p>Choose between the following in the dropdown menu:</p> <ul style="list-style-type: none"> <li>▶ <b>None:</b> No authentication other than specifying USER-ID and Password is needed.</li> <li>▶ <b>Mobile Security Code:</b> Upon login a six-digit security code will be sent to a specified mobile number of your choice, which can be used for additional authentication when logging in.</li> <li>▶ <b>Google Authenticator:</b> A mobile application that produces a random six-digit number which can be used for additional authentication when logging in.</li> </ul>

## 4 Security Policy

In the **Security Policy** tab several security policies can be edited such as:

- ▶ Password Policy
- ▶ Method Enforcing
- ▶ CSRF Validation
- ▶ Login Policy

Application Access Tokens can also be managed.

**Settings** [?] [ ] [X]

**CSRF Validation**

CSRF Validation

Protection against cross site request forgery attack

**Login Policy**

Grant Login from IP Network:

**Application Access Tokens**

+ New | - Delete

Active	Name	Usage	Token
Yes	Demo	0	

## 4.1 Password Policy

The **Password Policy** area is used to setup a policy regarding password complexity. Following fields are available to use to increase or decrease password security:

Option	Description
<b>Maximum Age</b>	Used to set for how long a set password is valid before it expires and the user has to set a new password.
<b>History Length</b>	Determines how many entries the system will save to confirm that the entered password has not been used before.
<b>Minimum Length</b>	Set the minimum length of the password.
<b>Enforce Numeric</b>	Determines the number of digits that the password must contain.
<b>Enforce Special Character</b>	Determines the number of special characters a password must contain. The special characters are `~!@#\$\$%^&*()-_+=+[{]}\ ;:~\",<.>/?`.
<b>Require initial change</b>	Force the newly created user to change the password upon the first login to the system.

When changing the password policy, the existing passwords that do not match the new policy will not be subject to change, the only change that affects all existing passwords is the **Maximum Age**.

The new setting of the **Maximum Age** will therefore be applied even for existing passwords.

## 4.2 Method Enforcing

The **Method Enforcing** area determines the type of method used for authentication.

Option	Description
<b>2-Factor Authentication</b>	<p>The available options are:</p> <ul style="list-style-type: none"> <li>▶ <b>None:</b> 2-factor authentication is not enforced; however, each user can still use a 2-Factor authentication on his/her account.</li> <li>▶ <b>Any:</b> This option enforces users to choose between the two authentication methods mentioned above.</li> <li>▶ <b>Mobile Security Code:</b> When this option is selected, a Mobile Security code is enforced as default on all users.</li> <li>▶ <b>Google Authenticator:</b> When this option is selected, Google Authenticator is enforced as default on all users.</li> </ul>
<b>Force SSO For Subusers</b>	<p>Force the subuser to use Single Sign On.</p> <p><i>Default Value:</i> Enable</p>

## 4.3 CSRF Validation

If enabled your account will have protection against cross site request forgery attacks. The reason for why this can be disabled is due to older integrations which do not have support for protection against cross site request forgery attacks.

**Note:** *Do not disable this if not necessary.*

Option	Description
<b>CSRF Validation</b>	<p>Protects against <i>Cross Site Request Forgery</i> attacks. Only disable for older integrations which do not have support for protection against cross site request forgery attacks.</p> <p><i>Default Value:</i> Enable</p>

## 4.4 Login Policy

The **Login Policy** area is used to grant login access from a specific network range. Here you can define multiple network ranges from which the users will be allowed to log in. If a user supplies the correct credentials but isn't located within the granted range, their access will be denied.

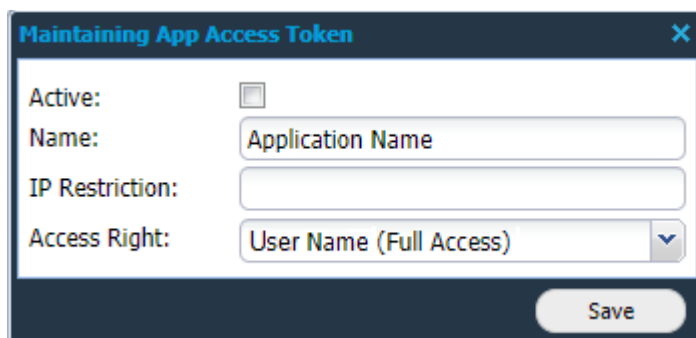

Option	Description
<b>Grant Login from IP network</b>	You can enter multiple entries (new line separated) in the following formats: <i>CIDR notation, network range</i> and/or single <i>IP addresses</i> .

## 4.5 Application Access Tokens

The **Application Access Tokens** are keys that are generated and can be used instead of username/password. The key can be copied and sent into the request as the parameter `APPTOKEN` using the API.

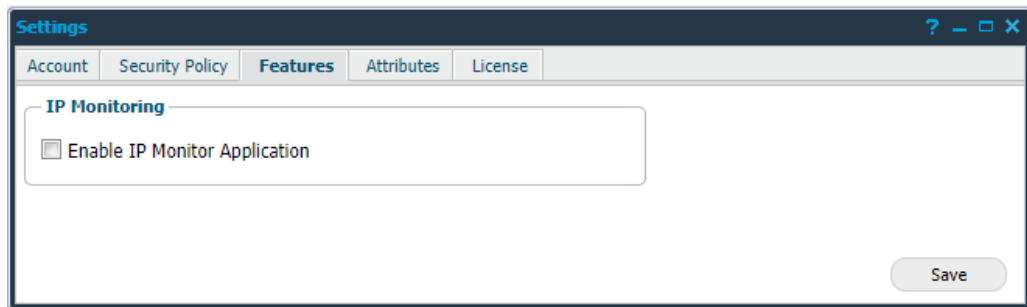

The **Application Access Tokens** area lists the applications using access tokens.

Clicking on the **+ New** button will display the **Maintaining App Access Token** window

Option	Description
<b>Active</b>	Checking this box will mark the token active.
<b>Name</b>	Indicates the name of the Application.
<b>IP Restriction</b>	Restricting the IP address used by the application.
<b>Access Right</b>	Indicates the type of access right.

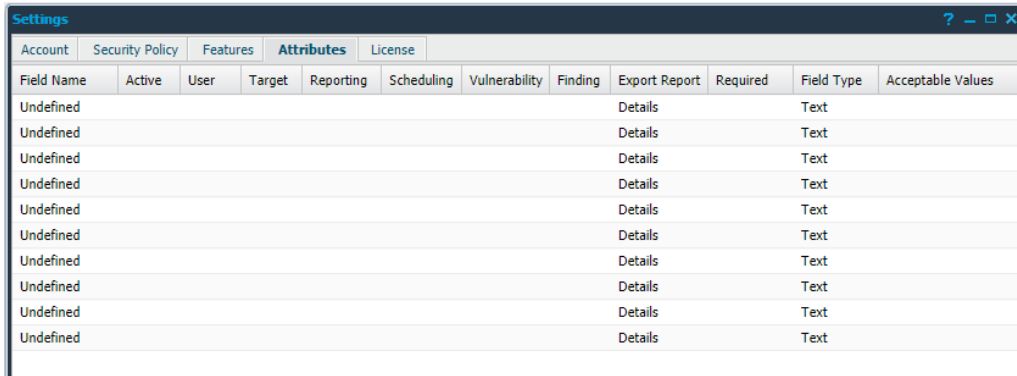

## 5 Features (HIAB only)

When the **Enable IP Monitor Application** is selected, an application is available in the menu which can be used to determine if a target goes online or offline.

Option	Description
<b>Enable IP Monitor Application</b>	Check this box if you want to enable <i>IP Monitor Application</i> . <i>Default value:</i> Disabled

## 6 Attributes

Field Name	Active	User	Target	Reporting	Scheduling	Vulnerability	Finding	Export Report	Required	Field Type	Acceptable Values
Undefined								Details		Text	
Undefined								Details		Text	
Undefined								Details		Text	
Undefined								Details		Text	
Undefined								Details		Text	
Undefined								Details		Text	
Undefined								Details		Text	
Undefined								Details		Text	
Undefined								Details		Text	
Undefined								Details		Text	
Undefined								Details		Text	

In the **Attributes** tab up to ten custom fields can be defined which can be used throughout the system.

They can also be configured to only allow predefined values.

The fields become available in the following sections depending on the configuration:

- ▶ Users
- ▶ Target
- ▶ Reports
- ▶ Scheduling
- ▶ Discovery

To define the different attribute settings:

1. Right click on an entry.
2. Choose **Edit** from the menu.

This opens the **Edit Attribute** window where the different settings can be defined.

**Edit Attribute**
✕

Field Name:

Active:

User:

Target:

Reporting:

Scheduling:

Vulnerability:

Finding:

Export Report:

Required:

Field Type:

Acceptable Values:

**Note:** **Active** needs to be selected to make all the other checkboxes available. Also, **Target** need to be selected to make **Reporting** available.

The fields are defined in the table below:

Option	Description
<b>Field Name</b>	Specifies the name of the custom attribute.
<b>Active</b>	If checked the attribute will be active in the system.
<b>User</b>	Creates a column in the <i>Manage Users</i> , is set when creating or editing a user.
<b>Target</b>	Creates a column in <i>Manage Targets</i> , which is set when editing a target or labeling a target group.
<b>Reporting</b>	Creates a column in <i>Manage Targets</i> and the <b>Findings</b> tab in <i>Reporting Tools</i> , which can be set when editing a target or labeling a target group. Only usable if target is selected.
<b>Scheduling</b>	Creates a column in the <b>Scan Schedules</b> tab in <i>Scan Scheduling</i> , which can be set when creating or editing a scan schedule.
<b>Vulnerability</b>	Creates a column in the <i>Vulnerability Database</i> , and in the <b>Findings</b> tab in <i>Reporting Tools</i> . This attribute can be set by editing an entry in the <i>Vulnerability Database</i> by right clicking the entry to edit and choose <b>Edit Attributes</b> .
<b>Finding</b>	Creates a column in the <b>Findings</b> tab in <i>Reporting Tools</i> , which can be set by editing an entry in the <b>Findings</b> tab by right clicking and select <b>Edit Attributes</b> .

Option	Description
<b>Export report</b>	Choose in what section of an exported report the attributes will be presented in. <i>User</i> , <i>Target</i> , and <i>Scheduling</i> are not presented in the exported reports. <ul style="list-style-type: none"> <li>▶ <b>None:</b> The attribute will not be included in any reports.</li> <li>▶ <b>Details:</b> The attribute will be included in both PDF and XML reports.</li> <li>▶ <b>Host Summary:</b> The attribute will be included in both Excel and XML reports.</li> <li>▶ <b>All:</b> The attribute will be included in PDF, Excel and XML reports.</li> </ul>
<b>Required</b>	If an attribute field exists for an entity, the attribute field requires a value.
<b>Field Type</b>	This will select a specific type of input that can be used in the attribute. <ul style="list-style-type: none"> <li>▶ <b>Text:</b> Input of strings.</li> <li>▶ <b>Combo:</b> Toggle a dropdown menu with values specified in <b>Accepted Values</b>.</li> <li>▶ <b>Checkbox:</b> Creates a checkbox for the attribute which allow the attribute to be checked or not checked.</li> <li>▶ <b>Number:</b> Only allows numbers to be entered in the attribute, ranges can be specified in <b>Accepted Values</b>.</li> <li>▶ <b>Date:</b> Allow the attribute to select a date through a calendar.</li> </ul>
<b>Acceptable Values</b>	Accepted values for the Combo and Number attributes. <ul style="list-style-type: none"> <li>▶ <b>Combo:</b> Specify values that is shown in the combo attribute, to separate values use the pipe   symbol, e.g. Mr Mrs Miss Dr etc.</li> <li>▶ <b>Number:</b> Specify an allowed range that can be entered in the attribute, e.g. 35-70.</li> </ul>

## 7 License

In the license tab, you can see the remaining number of scans on your account and the maximum number of targets that you can maintain in the system.
