

Keeping your business safe

We don't think it's fair that businesses are targets of cybercriminals. As a leading cyber assessment company, we're on a mission to help our customers tighten their cyber exposure before their business can be disrupted. Our ethical hackers and the tools they've created provide a complete view of your security posture with solution-based insights that facilitate and prioritize remediation efforts.

We offer scalable full stack security assessment solutions to reduce your attack surface:

Wireless/Network Security

Outpost24 provides complete coverage of your entire network airspace. Our easy to deploy and intuitive solutions detect and continuously monitors for vulnerabilities on your network. A combination of automated scanning and on-location detection to discover unauthorized threats which are ranked by severity for more focused remediation.

Web Application Security

As more and more companies are embracing agile development cycles, Outpost24 blends manual penetration testing with automated scanning to secure DevOps quickly and easily. Scanning both web server, application layers as well as the infrastructure it runs on, Our solutions offer a cost-efficient, accurate and easy way of assessing web applications.

Cloud Security

Whether you are moving to the cloud (e.g. AWS, Azure, Google Cloud Platform) or deploying containerized apps (e.g. Docker, Kubernetes), Outpost24 offers automated and continuous monitoring of your workload and checks cloud misconfigurations to secure data on public, private and hybrid cloud infrastructure.

Penetration Testing + Open APIs

Our Products

Outpost24 is a leading cyber assessment company focused on enabling its customers to achieve maximum value from their evolving technology investments. By leveraging our full stack security insights to reduce the attack surface for any architecture, Outpost24 customers continuously improve their security posture with the least effort.

Wireless/Network Security

Internal Network Vulnerability Security

HIAB (hacker-in-a-box) is an automated security solution that enables organizations to assess and manage technical threats against internal networks. HIAB™ is installed within the internal network and identifies vulnerabilities on all servers, workstations and other devices. With HIAB, scanning, reporting and all data analysis is performed within the appliance – ensuring that data never leaves your internal network.

Network Security & PCI Compliance

OUTSCAN is an on demand security tool that allows you to assess and manage your external network vulnerabilities. OUTSCAN is a SaaS solution, scanning your network and identifying threats and delivers actionable intelligence. A certified PCI ASV, OUTSCAN automates compliance checks and improves your risk management so you remain compliant.

Wireless Security

Pwn Pulse provides full threat detection for shadow devices, detecting and alerting you to unauthorized devices on your wireless network. Pwn Pulse tracks every wired, wireless and Bluetooth device with ease and automatically discovers devices in the range and builds a complete view of your network airspace.

Web App Security

SWAT

The Secure Web Application Tactics (SWAT) is the most complete hybrid testing solution for web applications available in the market. It offers customers a combination of state-of-the-art web application scanning tools and experienced ethical hackers to deliver regular manual pen tests with zero false-positives and full vulnerability coverage.

Appsec Scale

Appsec Scale delivers an automated DAST solution that compliments Outpost24 SWAT and PEN testing. This production safe solution can easily onboard applications at scale, and continuously monitors their vulnerability profile. In fact, the Appsec engine is the same as the one used in SWAT which means it learns as SWAT learns. Combined with vulnerability management, Appsec Scale gives you a more complete view of your application risk, all visible in one interface.

Snapshot/Assure

Snapshot/Assure works exactly the same as SWAT but in a 30/3 day testing engagement period, for companies needing a cost effective way to conduct security testing or report compliance status when launching new apps or for ad hoc quality assurance.

Cloud Security

Cloudsec Inspect

With Cloudsec Inspect networks and servers are automatically discovered. Its unique cloning technology runs cloud security diagnosis in the server clone and keeps the original production server untouched to minimize business disruption.

It's the only cloud analytics solution with an integrated vulnerability scanner. You will be alerted to any new security breach and cloud misconfiguration, and be able to focus your remediation effort and maintain compliance with CIS benchmark standards.

Implementing Outpost24 has saved our team a lot of time and effort from managing day to day vulnerabilities, allowing us to better understand the risk posture and enabling us to prioritize more effectively.

– Kim Millard,
IT Manager of Lomax

Our Services

Supported and implemented by our Security Experts

Managed Services

Outpost24 offers a full-service alternative to internal management of cyber exposure assessments, reducing the cost and time needed to hire, train and manage an in-house IT security team. Regardless of business size, Outpost24's Managed Services will seamlessly integrate full stack vulnerability management that meets the needs of your organization.

Penetration Testing Services

Outpost24 offers our Ghost Labs to organizations looking for an added element of human intelligence to their security program. Our ethical, technical experts – professional "hackers" – hold certifications such as Certified Ethical Hacker and CISSP and conduct detailed tests for technical and logical security errors according to OWASP guidelines.

They then evaluate and document possible points of attack on your networks or applications and explore points of weakness as a cybercriminal would. We offer the following areas and red teaming assessments:

Network & Infrastructure Assessments

- Internal & External Audits
- Wireless Network Audits
 - IPv4 & IPv6

Web Application Testing

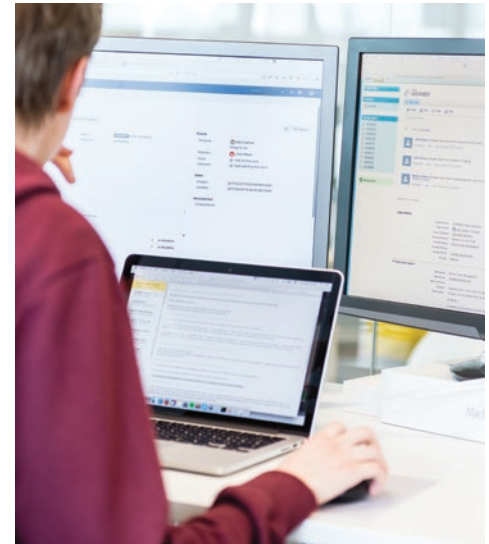

- Authenticated
- Unauthenticated
- Stress & DoS Testing
- Applets
- REST
- HTML5

Mobile Application Testing

- iOS
- Android
- Windows Mobile

Customer Success

We help customers unleash the full power of Outpost24, find and implement technical solutions, and provide guidance through deep relationships with our customers.

Our customers

Over 2,000 customers in more than 40 countries around the world trust Outpost24 to assess their devices, networks, applications, cloud and container environments and report compliance status for government, industry sector, or internal regulations.

The Outpost24 Advantage - The only platform to provide full stack cyber assessment

Security-focused Development

Outpost24's products and services are inherently secure; our technology is developed in the context of security needs and not driven solely by compliance directives.

Direct Customer Support

Our direct support ensures that all customers get the technical support they need, on-demand, by qualified technology experts.

Unlimited Scalability

Outpost24 tools fit internal and external networks of all sizes and can integrate with different appliances to increase scalability and span vast networks.

Management-minded Reporting

We help you bridge technical cyber assessment management details and business interests by offering solution-based insights that facilitate and prioritize remediation efforts.

Innovation

Outpost24 pioneers full stack security assessment and continually develops features to help customers proactively protect their critical assets and maximize their technology investment. In 2019, Outpost24 was recognized as a challenger in the Forrester Wave™ Vulnerability Risk Management Wave.

High Accuracy

Our innovative scanning tools are continuously improved to be the most accurate scanners on the market; Outpost24 maintains a uniquely low average of false positives.

Virtualization

Outpost24 supports all major virtualization and cloud platforms, resulting in simple, swift and seamless deployment, distribution and management of security insights.

Global Presence

Outpost24 understands the unique differences between markets. Our security and technical experts throughout the world work around the clock to help our customers improve their cyber resilience.
