When it comes to security flaws, be the first to find them

Identify, prioritize and remediate vulnerabilities in your infrastructure security

From stealing trade secrets to pirating customer information, cybercriminals are using more sophisticated tools and advanced techniques to disrupt your business. To stop them from finding holes in your defense, you have to find them first.

At Outpost24, we prepare you with complete vulnerability management (VM) tools—such as OUTSCAN and HIAB—and act as an extension of your team to evaluate your infrastructure from inside and out. Together, we shift the dynamic of your security strategy from reactive to proactive by prioritizing vulnerabilities based on exploitability; saving you time and money from identification to prioritization and predictive remediation, and making it even more difficult for hackers to attack the latest vulnerabilities.

Our new risk based vulnerability management solution, Outpost24 Farsight enables predictive prioritization of vulnerabilities, enabling you to triage your remediation more effectively so you can focus on what really matters.

3 out of 4 survey respondents reduced security flaws by at least 50% by using Outpost24’s VM solutions.

When to improve your VM solution:

- In doubt about your security posture or risk level
- Want to stay ahead of hackers with predictive insights and audience-specific trends
- Limited staff and resources, or security expertise
- Unsure about where to focus your vulnerability remediation effort to reduce time to patch
- Current VM does not play well with other security and operations technology ecosystem
Manage and prioritize vulnerabilities with predictive insights

OUTSCAN for external management
Whether you’re migrating workloads to the cloud, introducing mobile devices in the workplace, or SaaS solutions are being acquired by all parts of your organization; increasingly complex networks grow the number of publicly known vulnerabilities—increasing your risk of attack by external forces.

HIAB for internal management
At the same time, many security breaches are actually caused by people with access to internal networks, including staff, vendors, and customers. To protect intellectual property and brand reputation when you’re facing possible threats from all sides, your data and asset protection must be proactive.

Farsight for risk-based prioritization
The number of new vulnerabilities being released each year is growing faster than your security team can handle. Adopting a risk-based approach and prioritizing vulnerability remediation based on likelihood of an actual attack is the only way to stay ahead of imminent threats.

Focus on solutions not problems
Solution and risk based reports provide actionable insights to prioritize remediation efforts so security teams can do more with less

Powered by threat intelligence
Our tool delivers predictive risk scores, enabling you to focus remediations on the threats that are most likely to be exploited

Store your data, your way
Choose whether you want your data secured in our data center or in your private systems to meet data sovereignty requirements

Here for you when you need us
From setting up your VM program to providing ongoing help to fine-tune and improve effectiveness, we’re at your side at all times

High-impact, low-effort scanning
When continuous scanning is not possible our unique scanning-less scans highlight potential vulnerabilities based on last scan findings

Built for integration, plug and play
Out-of-the-box integrations and a complete set of open APIs allow you to automate and/or orchestrate any parts of the process. You can define and implement efficiencies based on your unique needs

The most significant value we’ve realized since using Outpost24’s Vulnerability Management Solution is the ability to more clearly view the impact and severity of risk we are exposed to.

— Security Manager, Medium Enterprise Media & Entertainment Company
Network security features and specifications

Evaluate your systems and identify weaknesses much like a hacker would. OUTSCAN scans your perimeter externally and HIAB scans internally—and can be deployed as a virtual appliance behind your firewall. Farsight (add on) provides real-time threat intelligence to predict the biggest risks, enabling you to prioritize your remediation effort with ease.

Centralized administration
- Unlimited, customizable role-based user administration
- Secure access to the systems using your normal web browser
- Simple and intuitive asset management
- Remediation ticketing
- Quick verification of remediation by a single click in the interface
- Two-factor authentication log-in
- Agent-based scanning (beta)

Analysis
- Flexible data selection in reports
- Reports detailing trends, risks, solutions, and vulnerabilities
- CVSS (Common Vulnerability Scoring System) rating enables automatic, standardized prioritization of risks to remediate
- Identify and create reports based on solutions, providing the short and easy to use reports IT requires
- SLS (Scanning-less scanning) alert technology monitors security between scans to keep you constantly up to date

Automated functionality
- Identify new exposed services
- Identify vulnerabilities and alert immediately
- Flexible scheduling of vulnerability scans
- Fully automated reporting with adaptable content
- Alerts via email or SMS upon new critical risks

Risk-based prioritization (add on)
- Contextual risk score puts you ahead of the attackers with trusted threat intelligence on the biggest risk
- Go beyond CVSS to prioritize remediation efforts based on dynamic insights of weaponized exploits
- Improve patch management with evidence based predictive risk score
- Real time risk score using machine learning algorithms to monitor hacker community for added accuracy
- Fully integrated with HIAB and Outscan for a single view of predictive risks against CVEs

Extension
- Flexible licensing and scalability allows for growth or changes in network assets
- Support for all types of network technology
- OUTSCAN and HIAB integrate seamlessly with our application and cloud security assessment tools
- 100% open API enables custom integrations
We defend you from hackers by thinking like them

In fact, we have our own team of ethical hackers. That’s why we approach security with a holistic view of your systems and pivot where a hacker would. Outpost24 is the only VM company that provides tools that correlate findings beyond just devices and networks—at the application layer and higher up the stack. We evaluate all key assets that keep your business running smoothly.

We also provide integration points to your other security and operational technology, including IAM, PAM and SIEM etc for a complete view of risk and how to react to it.
