# Outpost24 CORE
Unified Exposure Management

Achieve better cyber resilience with complete threat visibility and mitigation guidance

Managing threat exposure with a manual, siloed, and reactive approach is no longer effective. Without a unified view of an organization's exposure, it is impossible to understand where the security gaps are and prioritize mitigation efforts that will prevent likely attacks.

Outpost24 CORE provides actionable insight of your organization's entire attack surface, from infrastructure to applications and user access. It helps security leaders and their teams understand, monitor and report on their Key Risk Indicators (KRIs) and efficacy of their mitigation activities.

- Consolidate siloed vulnerability and threat data across full stack technology into a single dashboard for total visibility

- Dynamic asset grouping and reporting on how risks are being controlled and mitigated across technology layers and business units to inform decision-making

- Quantitative risk score based on the likelihood of exploitation and business impact to ensure security resources are deployed effectively
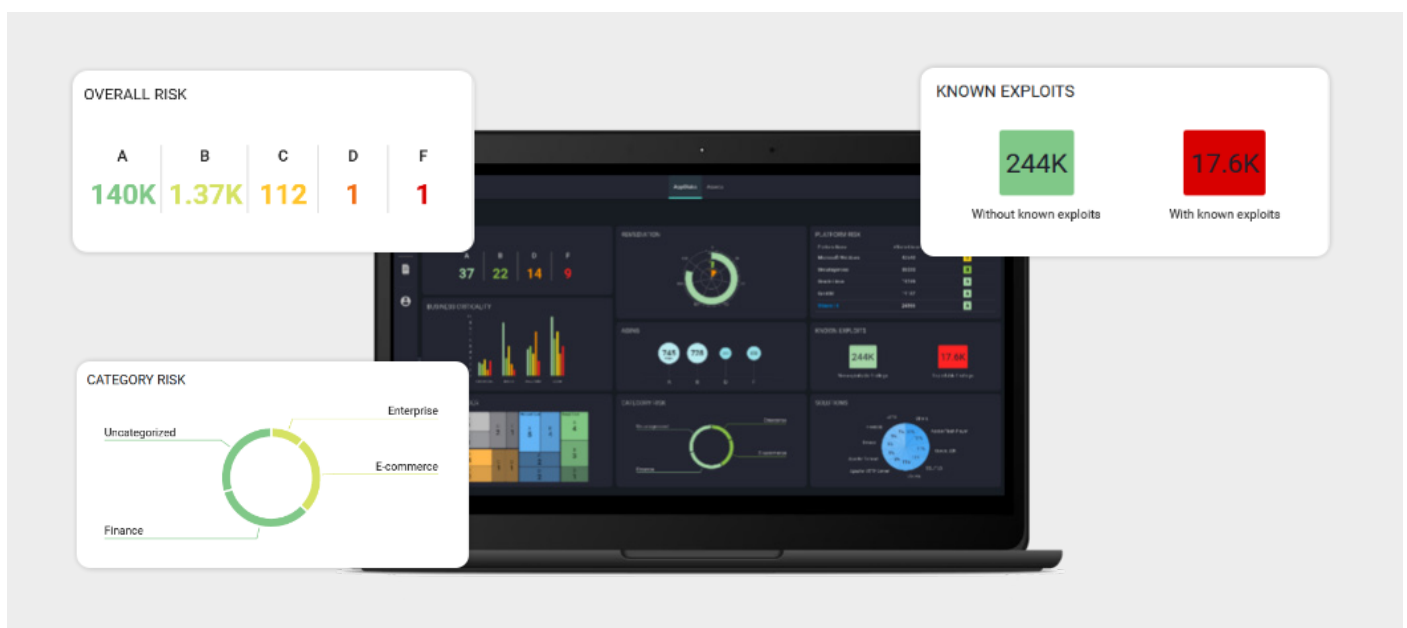

Maximize the efficacy of your security resources

Monitor Key Risk Indictors (KRI) and prioritize cyber risk through quantitative measures	**Facilitate risk communication to key stakeholders from the board, executive management to business units leaders**	**Validate the effectiveness of security initiatives in terms of controls/program efficiency and investment areas**

Outpost24 CORE provides comprehensive, unified exposure management across *network* and *cloud infrastructure, web applications*, and *user access security* in one place, ensuring security teams can focus on triaging threats that matter to their business. With Outpost24, you can be confident that security investment is fully aligned with your organization and board level expectations.

CISOs and MSSPs must connect cybersecurity to business outcomes

Vulnerability Data Overload

The pace of new technology and cloud adoption has resulted in the explosion of new vulnerabilities coming from different technology layers. Security teams simply don't have the bandwidth and knowledge to deal with them all, leading to a widening gap for threat actors to exploit.

Lack of Visibility and Context

With growing technology complexity, security teams are dealing with a haystack of vulnerabilities generated by different scanners. To achieve total visibility and optimize efficiency, they need a single view of prioritized actions, with quantitative risk scoring that will guide their remediation efforts.

Executive and Business Buy In

Convincing executives and the board to invest in cybersecurity is difficult. They don't have time to read reports that they don't understand. CISOs need an overview of the organization's threat exposure, how it impacts the business, and what to do in order to get the buy in and resource they need.

Identify and prioritize mitigation with clarity

Real time, 360-degree view of your exposure on a risk grading from A to F

Consolidate point assessment data from different sources

Integrated threat intelligence to identify the biggest risks

Cyber risk quantification for vulnerability prioritization

Business logic mapping to optimize resource allocation

Dynamic grouping of assets and risk level for business reporting

Continuous assessment and monitoring

Trends to monitor and report on risk reduction over time

Improve cyber resilience with speed and confidence

Outpost24 CORE provides complete visibility of your security exposure by consolidating siloed vulnerability data, correlating exploitability, threat indicators and business impact into a single dashboard with easy to understand risk scoring to prioritize mitigation. Get a quick demo today to optimize security impact and improve cyber resilience for your business.

Unified exposure management. Better security, less effort

About Outpost24

The Outpost24 group helps organizations reduce their digital exposure with a complete range of cyber risk management solutions. Outpost24's cloud platform unifies asset inventory, automates security assessments, and quantifies risk in business context. Executives and security teams around the world trust Outpost24 to prioritize the most important security issues across their entire IT infrastructure and accelerate risk reduction.
