

Credit Cards

Recover stolen credit card information in real-time

Credit card fraud is being carried out on an industrial scale, and protecting customer and employee data should be of paramount importance.

Detect and retrieve compromised credit cards from infected POS and underground forums to protect your customers and help prevent fraud.

The Credit Card Theft module flags malicious activity in real-time, reducing the potential impact of fraud and attempted fraud on your bottom line.

What business benefits does it deliver?

1. Reduce fraud and insurance costs, including indirect losses to the card issuer
2. Protect your brand reputation and ensure you deliver a trustworthy customer experience
3. Protect employees and end clients from fraud

What does it do?

1. Provides real-time notifications for stolen credit cards
2. Provides information around compromised PoS devices, the most common source of compromise
3. Provides automated dashboards including relevant, actionable trend information
