

# Outscan NX

## Service Specific Terms

Outscan NX is an advanced vulnerability risk management solution that helps businesses secure their networks and cloud environments. It uses evidence-based threat intelligence and machine learning to analyze and predict the likelihood of vulnerabilities being weaponized and exploited over time. With easy-to-understand risk ratings, Outscan NX enables organizations to prioritize and address real threats beyond the Common Vulnerability Scoring System (CVSS), protecting against potential exploits by attackers.

Outscan NX is made available to the Customer as an annual subscription, contingent upon the baseline of assets, the number of targets, that needs to be assessed. Outscan NX gives the user the flexibility to assess more assets than the baseline states if needed. The overage will be billed monthly based on the price band of the subscription.

An asset being defined as an IP Address, Hostname or Agent which can be assessed.
