Specops uReset

Service Specific Terms

Specops uReset is a cloud-based self-service password reset solution that seamlessly integrates with Active Directory and Entra ID. It empowers end users to handle common password-related tasks, such as forgotten passwords, expired passwords, and locked accounts. By utilizing a robust multi-factor authentication engine, users can securely reset their passwords from any location, device, or browser, relieving the IT service desk from these routine tasks. It also provides real-time feedback to users, indicating which criteria they have met or not met while attempting to reset their passwords.

The Third-Party Authentication Package is an optional add-on for Specops uReset. It enables the use of supported third-party authentication services for user enrollment and verification.

The Federation Package is an optional add-on for Specops uReset. It enables the use of account credentials and access tokens from supported third-party identity stores for user enrollment and verification.

Specops uReset, including any accompanying Third-Party Authentication Package and Federation Package, is made available under an annual subscription agreement. The subscription is limited to the number of enabled directory (Active Directory, Entra ID or both) user objects within scope of a Specops uReset Cloud Policy or Specops uReset Group Policy Object (GPO) across all affected domains.
