Machine Readable Threat Intelligence (MRTI) Feed

Service Specific Terms

MRTI Feed helps organizations protect their assets from online threats by gathering and analyzing global threat data from multiple sources and turning it into actionable intelligence. MRTI Feed provides near real-time, detailed information about threats from the open, deep, and dark web, including indicators of compromise (IoCs) such as malicious URLs, domains, IP addresses, file hashes, and YARA rules, and may also include strategic intelligence such as threat actors, malware families, tools, attack patterns (including MITRE ATT&CK mappings), and relationships between these entities.

MRTI Feed is delivered in industry-standard formats and protocols, including STIX 2.1 and TAXII 2.1, and is designed to integrate with compatible SIEM, SOAR, and threat intelligence platforms, as well as custom tooling.

MRTI Feed is made available to the Customer under an annual subscription agreement; MRTI Feed may be purchased as either (a) an IoC-only offering providing access to the IoC feed collection, or (b) a Full feed offering providing access to both the IoC feed and the Strategic feed collections. Access is controlled via bearer token authentication and is granted based on the Customer's purchased entitlement.
