

EASM

Service Specific Terms

1. Introduction

The EASM (External Attack Surface Management) platform by Outpost24 provides a comprehensive solution to manage and monitor your external attack surface while gaining insights into potential cyber threats. This service allows customers to leverage the EASM platform's capabilities to enhance their security posture.

2. EASM Platform

The EASM platform is a cloud-native solution that helps companies manage their external attack surface. It continuously discovers, analyzes, and monitors various aspects of a company's online exposure, such as domains, websites, hosts, services, technologies, and SSL certificates. By applying a "zero-knowledge approach," minimal information, such as a company name or primary domain, is required to begin providing real-time feedback on changes and issues in the organization's external attack surface.

3. Subscription and Licensing

Customers subscribing to the EASM will be quoted the following fees:

Annual EASM Platform Subscription License: This fee is based on the number of Assets monitored in the Customer's organization.

4. Licensing Definitions

Asset: The sum of the number of domains, sub-domains, IP addresses in the scope

If the number of assets exceeds the licensed quantity by 20%, a re-calculation of the pricing will be triggered.
